

Instruction for Installation & Version Update

1. How to install the script.

Answer: Please follow the following procedure to install this script in online server:

1. Upload the zip file downloaded from CodeCanyon to your server in the public_html or, any other directory you intend the script to run.
2. Extract the zip file in that directory.
3. Create a new database from your server MySQL with PhpMyAdmin.
4. Create db user to the database and link that database to the db user.
5. Make sure the required files are permitted writeable in the folder you put them and all the requirements are fulfilled by the server environment.
6. Go to PhpMyAdmin and import the sql in your created database from the extracted files.
7. Open the application/config/database.php file and change the below values with your data:

```
'hostname' => 'localhost',  
'username' => 'MySQL username',  
'password' => 'MySQL user password',  
'database' => 'database name',
```

Finally browse the script.

Admin URL : your site/admin , Admin email : admin@matrimonial.com, Admin password : 1234

2. How to update the version from 1.8 to 1.9?

Answer: This update will be workable if the installed version is 1.8

1. Log in to your cPanel. Open File Manager.
2. Open the folder where your running script is located.
3. Upload the application.zip file from updates/1.8 to 1.9/application.zip which is downloaded from CodeCanyon to your server where your script is running.
4. Extract the zip file in the root directory of the running script. (Example: if your script is located in the public_html/matrimonial in the server. Then, public_html/matrimonial is the root directory.)
5. Import the .sql file which is provided in the updates/1.8 to 1.9/ folder .

That's it!
